Mentoring Educator's Name: _____

Placement Site Name: _____

ANECDOTAL OBSERVATION (What did you see? What did you hear?)

Address: WHO? WHEN? WHERE? WHAT? YOUR ANSWERS MUST BE TYPED ON THIS DOCUMENT. USE AS MUCH SPACE AS NEEDED TO ANSWER THE PROMPTS IN EVERY QUESTION IN DETAIL IN EACH SECTION OF THIS PLAN.

Ensure your anecdotal observation is:

- objective (measurable facts only);
- written in the past tense;
- written in third person;
- uses gender neutral pronouns (e.g., they/them);
- ensures the anonymity of the people observed, (e.g., Child A/Educator A).
- uses language that is specific

- DO NOT USE it seems..., it appears...,
- DO NOT use developmental language here.
- Minimum of 250 words

Complete the anecdotal observation section in paragraph format telling a story by answer the following prompts:

- Age of children
- Identify if it is a group of children or individual child.
- Where are you observing the children?
- What time of day?
- What did the child/children do?
- What materials/environmental elements did the children play in/with? How did the children play with them? Did the children play alone or in a group
- How is the outdoor environment experience set up? Individual, group, quiet, active/risky play (explain each set up).
- Verbal communication: What did the child/children say aloud as they played with the materials/environmental elements?
- Non-verbal communication: What did the child/children say with their bodies as they played with the materials/environmental materials (e.g., body language – facial expressions, eye gaze, gestures, posture, body movements, etc.)?

It is a group of infant children, the observation happened in the infant classroom setting and it was in the morning free play time. When I set up the pulling scarves activity in the middle of the classroom, Child A walked towards it right away to interact with it. While other child B was crawling over the materials to engage with child A. After they saw, those colorful scarves were shown to them, child A started to sit down and used their right hand to pull the yellow scarf right away. After that, child B saw what child A had done and then they imitated child A immediately and pulled out the green scarf while scrunching their face. Moreover, Child A kept on pulling other scarves with both of their hands while having a wide smile on their face and giggling loudly. Then, when the educator asked them “Can you try it again? Pulling the scarf!”, Child A heard that and looked at the educator with wide eyes and began to pull the red scarf as the educator pointing at. After that, when the educator talked to them while putting the scarves back into the holes, Child A saw it and did it together with the educator. Then they repeated the actions all over again, sometimes they even threw the paper box away while holding the scarf. Child B, when seeing child A playing with the scarves, sat beside child A quietly looking at child A and then giggling with child A when they were pulling out the scarf completely.

INTERPRETATION (What do you think it means?)

Address: Why?

Your interpretation:

- is based on your observation.
- is subjective
- uses sentences that start with “It appears...”, “it seems...”, “According to my observation...), etc.

Note: Complete each of the following sections in full paragraph or point form

- What are the children’s interests, questions, curiosities, experimentations and their development? How do you know, **must give examples from your observation?**

Based on my anecdotal observation, it seems that children love throwing things that they have in their hands. Moreover, it appears that they are good at expressing their emotions and non-verbal language. For example, they were giggling while pulling out the scarves and looking at the educator with wide eyes. Moreover, they seem to be curious about things surrounding them. As I set up my activity, they come to those materials right away.

How does your interpretation connect with curriculum/professional documents?

- **Choose ONLY ONE** that is applicable to your interpretation and explain your choice, give examples from the observation **in detail**. **You must paraphrase, site the page number and indicate the document you are connecting it too.**
- focus on **one** of the **4 Foundations** in *HDLH* [OMEd, 2014a];

- **focus on one of the Principles in *Excerpts from E.L.E.C.T*** [2014b]; (not on the domains and skills from the development section)
- focus on **one** of the **articles** in *Think, Feel, Act* [2014c];
- focus on **one** the **Standards in the Code of Ethics and Standards of Practice** [CECE, 20`7]; etc..
- Indigenous Early Learning Framework, etc.).

***Note: DO NOT make connections to developmental milestones in this section of the interpretation.**

From the interpretation, it really connects with one of the 4 Foundations in *How does Learning Happen?* [OMEd, 2014a] as in **Expression** stated that every child has the opportunity to express their emotions in many different ways. (OMEd, 2014a, p.23). From this, children can learn to express themselves when interacting with the materials and engaging with their peers in playing and learning the materials. As in the observation, child A can express their emotions through body language and communicate their thought through gestures.

Consider the use of the environment as a teacher, 'What role did the following factors play in what you observed Consider the following: (e.g., **enhance and/or limit play**)?

- Space; (location, amount of space)
- Materials; (types/properties)
- Time; (time of day, duration of experience)
- The role of the educator; (as an observer; facilitator; co-learner etc.)

Space: the experience was in the classroom which is familiar to the children because they have get used to the environment surround them. From that, they can learn and play without any challenges.

Materials: The paper box and scarves, there are many materials so that every child can interact with it without having confliction with each other.

Time: It was inside the classroom in the morning free play time so children can learn and play easily.

The role of the educator: as a model, educators can help children to learn more skills by modeling for them so that they can observe and imitate the educators' behaviours.

Consider the image of the child as “competent, capable of complex thinking, curious and rich in potential” (OMEd, 2014a, p. 6):

- Describe one (1) **strength** derived from *Excerpt's from E.L.E.C.T.*'s (OMEd, 2014b) continuum of development example as follows:
 - **Developmental domain** (physical, cognitive, social/ emotional, communication, language and literacy), skill reference #, skill. **Example: if you are observing toddlers - Physical: 5.2 Fine Motor-Tool use ..Child A used a spoon to scoop the sand**
 - Provide evidence from your observation to support your choice.

Strength:

Physical: 5.2 Fine motor- pincer grasp (OMEd, 2014b, p.26). Child A was able to hold the paper box and those scarves with their fingers and hands to pull it out of the holes that was in the paper box.

- Describe **1 one opportunity for growth** derived from either your Development Courses (114, 124 and 244) or *Excerpt's from E.L.E.C.T.'s* (OMEd, 2014b) continuum of development example as follows:
 - **Developmental domain** (physical, cognitive, social/ emotional, communication, language and literacy), skill reference #, skill. **Example: if you are observing toddlers – Cognitive: 4.3 Cause and Effect- Exploration..child A placed the duck in the water to see if it would sink or float**
 - Provide evidence from your observation to support your choice

Opportunity for growth:

Cognitive: 4.2 problem solving (OMEd, 2014b, p. 22). Child B was only following child A actions and behaviours has not yet try to problem solving by themselves and just pull the scarf after seeing what child A has done.

FULLY DETAILED, PLANNED RESPONSE (What will you do?)

Collaborate with your Mentoring Educator about your plan. Get their feedback and approval. Communicate and share your final plan with your Mentoring Educator and have them sign this section before implementing the planned experience the following week.

A grade of 0 will be given in the Planned Response, if the Mentoring Educator does not sign this section.

Complete the following section (point form is acceptable):

Reflect and describe the following:

- Give your Responsive Inclusive Planned Experience a Title/name,
- What will you do? **Be specific and detailed!** This section must be described in detail. Your plan must show the **step-by-step process** of the experience.
- When will you do it? Why?
- Where will you do it? Why?

Based on my Anecdotal Observation, the children kind of like throwing the materials that I prepared for them. So, I have decided to plan an activity called "Tossing the rings". I will prepare a wooden set of materials that I can attach it to make it becomes a bar. Moreover, I will prepare hoops with different textures so that children can use those hoops to toss in the bar. When children interact with this activity, they can use their whole body from using hands to toss those rings, or to walk towards the bar to pick up those rings and repeat the actions. I will do it in the infant playground during the morning time.

- List existing materials/environmental elements from your Anecdotal observation.
- List new materials/resources and environmental elements you will bring in/add to set up provocations. **Use step-by-step instructions on how the materials will be set up and explained to the children.**

List of existing materials from the Anecdotal observation are paper box with holes and colorful scarves.

The new materials that I have used to set up the activity outdoor this time are:

- Different kinds of rings that have various patterns and colours.
- Wooden standings and sticks with the animals cover on top to help children figure out the same patterns and what animals are on the sticks.

Children will stand or sit to throw the rings in the sticks and can repeat the actions again. Moreover, it will help children to know how to throw the hoops right into the sticks.

- **MUST include a photo** of the set up (must be a photo of your experience not a photo from the website) and materials/environmental elements before the children engage in the experience (if permission is granted by the centre) **OR** take a photo of the set up at home.

Reflect on the following:

- How does your planned response **connect to your observation and interpretation**? Refer to the interests(s), strength and opportunity for growth you identified in your interpretation.

Through my observation and interpretation, my planned response is created based on children's behaviours and interests as they love to throw things and discover things surround them.

- What role will you, as a co-learner, have in your planned response? **Identify one (1) teaching strategy** you will use and describe how it relates to the observed interest, strength and opportunity for growth identified in the interpretation.
Name the Teaching Strategy and describe:

The teaching strategy that I will use is “modeling”. Modeling the way to play with these materials and the behaviours when playing with these materials, it will help children to learn by seeing and imitating what educators do rather than telling them.

- How is your plan responsive inclusive? **Discuss one (1)** of the following Foundations for Learning from *How Does Learning Happen?* (OMEd, 2014a): **You must paraphrase, site the page number and indicate which foundation you are connecting it too:**

- Belonging,
- Wellbeing,
- Expression or
- Engagement

My plan is responsive and inclusive by following the Foundations for Learning from *How Does Learning Happen?* argue that every child is an engaged learner who loves to explore things surround them through their whole body and mind. (OMEd, 2014a, p. 23). From this activity, children can play with their whole body and having fun experience through connecting with their peers and educators.

SIGNATURE REQUIRED HERE FROM MENTORING EDUCATOR, PLAN IS REVIEWED AND APPROVED FOR IMPLEMENTING NEXT PLACEMENT DAY:

Mentoring Educator's Signature: _____

Date signed: _____

A grade of 0 will be given in the Planned Response, if the Mentoring Educator does not sign this section.

REFLECTIVE EXTENSION (What happened?)

This follow-up reflective extension is based on what happened when you implemented your initial experience. What have you learned and what you will do next to extend your initial planned experience?

Complete the following section (point form is acceptable):

Reflect on the following:

- How did your planned response support your anticipated focus? Refer to the interests(s), strength and opportunity for growth you identified in your interpretation.
- What happened when you implemented your experience?
- What did you learn?
- What are some things you did to present new challenges to the child/children as you were interacting with them?

My planned response has a big impact on supporting my concentration as it was relied on my anecdotal observation and interpretation that they love to throw things and discover things surround them. Moreover, this activity includes and enhance their strength as I mentioned above, and they can have the opportunity to grow more the area that need further development. When I implemented the experience, children feel happy and excited as they can see colorful materials that have been set up for them.

EXTENSION:

Describe your second experience:

- What is your second experience? Give it a title/name,
- Describe in detail and step by step instructions,
- Experience focus (linked to interests, strengths, opportunities for growth).
- Role/expectations of the child(ren);
- Role of the educator, what teaching strategy will you use?
- List of new materials/resources;
- Location of experience;
- Arrangement of furniture if applicable;
- Time, duration of your second experience:

The second experience that I make for the children is the bowling set with different colours. I will have seven bowling figures that have the worm characters on it with the ball so that children can use it throwing to make all the figures fall and they can redo it again. I will put these the next day after having done the first activity with hoops and sticks. From this experience, it will promote their physical skills as they can develop their gross and fine motor skills such as walking, running, picking up things and throwing. Moreover, their cognitive skills will be improved as they have to think how they supposed to make all the figures fall down.

MENTORING EDUCATOR'S FEEDBACK

A grade of 0 will be given if the initial experience and extension is not implemented to the children in the classroom.

Mentoring Educator's Feedback on Initial implementation of the Responsive Inclusive Experience:

- ☒ Yes, learner implemented the initial Experience.
- ☐ No, learner DID NOT implement the initial Experience.

Mentoring Educator's Signature: _____

Date: MARCH 18, 2025

Mentoring Educator's Feedback on Extension:

- ☒ Yes, learner implemented the extension.
- ☐ No, learner DID NOT implement the extension.

Mentoring Educator's Signature: _____

Date: MARCH 18, 2025
